

Anexo M — Decisiones del dueño tras la spec

Generado desde el repositorio storyMaker · commit da1c8b6 · 2026-09-25 18:44 UTC · Qaracter group 2026

Cada decisión tomada después de aprobar la spec, con las **palabras del dueño**. Una aprobación solo vale si la escribe él; se copia tal cual (docs/spec.md §8).

fecha	decisión	palabras del dueño
2026-09-23	The orchestrator stays on the session's model (models.orchestrator: null); only the ten agents run on Haiku	— (measured; SPEC-011 already said null)
2026-09-23	The exam profile's budget ceiling is 60.0 USD (was 15.0) — AGENTS.md §6 protects this figure, and this row is the recorded decision	"si", answering Q25: raise the ceiling to 60
2026-09-23	The five evaluation briefs run with 3 chapters each (profile eval = exam with novel.chapters 3 and the tiny word band); the example novel is the full 10 chapters	"si", answering Q26
2026-09-23	The orchestrator's context is measured against the 100,000-token ceiling, warned and shown, not halted; a per-stage orchestrator (a fresh Claude Code process per stage and per chapter, state on disk) is the declared next step that would bring it under	"uso tu recomendación", answering Q27 (option C)
2026-09-23	The per-stage conductor stays, the 100,000 ceiling stays, and the gap is declared; large units are split (outline into writing and audit; cast into characters and timeline/mysteries)	the owner chose "bajar el suelo y seguir con el conductor" and "el techo se queda y se declara el hueco" in the build session
2026-09-23	Fallback deadline: Thursday 2026-09-24 12:00 Mexico time (18:00 UTC). If by then the conductor has not produced the 10-chapter example novel, the single-orchestrator path runs it with the 60 USD ceiling (about 2.5 hours), and the conductor is presented as buil	"va", answering Q29
2026-09-24	The evaluation briefs run with 1 chapter, not 3 (supersedes the 3-chapter row above); the example novel stays at 10 chapters. The full test suite is no longer re-run after every change, only the tests of the file touched	the owner, in chat to the coordinating session: "super si eso me gusta", answering the recommendation to cut the evals to one chapter and stop re-running the su
2026-09-24	The recipient's name is inserted by code at publication, not written by the model. The orchestrator, under the organisation's data-protection policy, wrote the placeholder [NOMBRE_ANONIMIZADO] in place of the brief's recipient alias (Bible, outline, chapters);	the owner, in chat to the coordinating session: "la b", choosing mechanical substitution over relaunching
2026-09-24	The buyer chooses the length: any number of chapters from 1 to 10 (default 10), on the exam profile. Supersedes SPEC-EXAM-002's "shown, never editable" length field. The count travels as chapters in POST /api/runs into the run's config snapshot, which every st	the owner, in chat to the coordinating session: "no me deja cambiar la longitud", then "no solo quiero la opcion de entre 10 y 1 quiero yo ponerle cuando quiero
2026-09-24	The example novel's run (02412b7fe29e) may spend up to 75 USD in total to finish chapters 9 and 10 — names the protected budget ceiling (AGENTS.md §6) for this one resumption only; the exam profile stays at 60. The run had stopped itself at 52.83 of 60 with 8	the owner, in chat to the coordinating session: "y la opcion b", choosing B ("aprobar por escrito un techo nuevo para la reanudación") after being told it would
2026-09-24	The orchestrator runs on Sonnet in the exam and eval profiles (supersedes "the orchestrator stays on the session model"). Not Haiku: on Haiku it stopped dispatching the project's agents. The run resuming chapters 9-10 was launched before this and keeps its mod	the owner, in chat to the coordinating session: "baja el orquestador y menos criticos tambien me gustaria que los gastos bajen si se puede"
2026-09-24	A reader change is accepted only if the changed fact arrives: each affected chapter's writer packet carries the new text as mandatory, and before a chapter counts as accepted an arithmetic check confirms the new text is present and the old one (with its plural	"Rehacer el cap. 3 con control", answering the build session's proposal (coordinating session, ~21:15 UTC)

fecha	decisión	palabras del dueño
2026-09-24	A per-novel spending cap: Continue asks for no figure (SPEC-007 §8), but is refused once a novel's known spend reaches $\text{budget.novel_ceiling_multiple} (2) \times \text{its profile's ceiling}$	"Tope automático por novela", answering the build session's question in its own session

13 decisiones. Ninguna cambió un valor protegido de AGENTS.md §6 sin nombrarlo.
