

Anexo O — Inspección visual con browser MCP

Generado desde el repositorio storyMaker · commit da1c8b6 · 2026-09-25 18:44 UTC · Qaracter group 2026

El validador `visual_check` inspecciona el libro renderizado: portada con dedicatoria, índice con enlaces que llegan, ficha de personajes y lugares, página "what changed" ($v > 1$) y ausencia de restos (Markdown, `TODO`, marcadores). Configuración: `.mcp.json` (Playwright MCP); método y checklist: `docs/browser-mcp.md`.

fecha	versión	resultado	qué encontró
2026-09-24	v1	fail (check 1)	driven with Playwright from Python by the build session, not through the MCP client. 1 cover: no dedication and no alias — nothing wrote <code>dedication.md</code> for a run started from a brief; fixed for later versions in 4cf8a8e, v1 left as published. 2 index: 8 entries, 8 links land. 3 sheet: 5 characters link to their first ch
2026-09-24	v2	pass	the completed book (10 chapters, after the resumed run), same method as v1. 1 cover: title and dedication with the alias. 2 index: 10 entries, 15 links land. 3 sheet: characters link; the one place has no first chapter recorded. 5 no leftovers. Recorded in validations
2026-09-24	v3	pass	the reader change (fact 36 → "the wooden treehouse observatory"). 4 what changed: the first page, linking chapters 3 and 10. 1 cover with dedication. 2 index, no broken link. 5 no leftovers. Recorded in validations

Qué cambió por ello: la v1 falló la portada (sin dedicatoria ni alias, porque nada escribía `dedication.md` en un run que sale de un brief). Se corrigió en 4cf8a8e; la v2 y la v3 pasan.
