

Anexo L — Verificación: garantías y huecos declarados

Generado desde el repositorio storyMaker · commit 014fb99 · 2026-09-25 18:45 UTC · Qaracter group 2026

docs/verification.md clasifica cada garantía con su letra (T test, A análisis, I inspección, D demostración, U no verificable) y un nivel de criticidad. Su §3 lista lo que **no** está verificado, y por qué es una decisión:

Un hueco listado es una decisión. Un hueco no listado es un defecto.

§	hueco declarado
3.1	patch_then_halt is demonstrated, not tested — and G6 is critical
3.2	The outline audit is a judgement, and G11 is important
3.3	Cost has no split by agent
3.4	The ceiling cannot be reserved before a call
3.5	The packets the ceiling is about are measured as a total, not as a packet
3.6	Four of the six gate scores are a model's judgement
3.7	An agent cannot measure its own work
3.8	A critic can raise a false finding
3.9	Nobody measures the quality of the prose
3.10	A false prose finding damages a correct chapter
3.11	A run's procedure can change while it is running
3.12	The procedure in SKILL.md cannot be tested at \$0
3.13	The archive is as complete as the orchestrator's writing was
3.14	A run that dies mid-flight archives nothing
3.15	Two memory layers are built, tested, and not running
3.16	An interrupted run is not resumed
3.17	The writer's isolation is asserted from a file, not observed at runtime
3.18	Repairing one characteristic can break another
3.19	The backend writes no log file; the database is the log
3.22	GET /api/runs/{id}/events with an unknown id fails inside the generator
3.21	Whether --max-budget-usd binds under a subscription is unknown
3.20	The import CLI on a fresh database labels v2 runs as v1 history
3.23	The recipient's alias is put in by code, after the gate
3.24	A unit that is stopped leaves no cost in the ledger
3.25	A redo overwrote the stream of the pass it redid (before SPEC-EXAM-008)

25 huecos declarados, cada uno con qué no se verifica, por qué se acepta, el alcance del daño y cómo nos enteraríamos.
